ida Trypan Blue

BSS
Balanced Salt Solution

S_{ida}Blue

Trypan Blue

Ophthalmic Solution 0.06%

- High purity levels
- Capsule staining is quick, easy and safe to perform
- Creates excellent staining contrast for anterior and posterior capsulorhexis

S_{ida}Blue - 1ml vial

- Easy application
- Reduces duration of surgery

S_{ida}Blue PFS - 1ml Prefilled syringe

- Ready to use syringe
- Ergonomic grip for better control of the injection
- Ophthalmic cannula included

INDICATED FOR:

- Cataract surgery with poor red reflex
- Phacoemulsification
- Small incision cataract surgery
- Incomplete capsulorhexis
- Any high risk cataract case
- Trauma Cases
- Teaching trainee surgeons

BSS

Balanced Salt Solution

Saline Intraocular Irrigating Solution

BSS is a sterile physiological solution containing ions essential for the integrity of the ocular tissues during ophthalmic surgery. With a composition similar to the aqueous humor and vitreous body of the eye, BSS naturally hydrates, lubricates, washes and protects tissues and cells during any ophthalmic surgery, such as:

- refractive surgery
- phacoemulsification
- vitrectomy
- corneal irrigation
- extraocular irrigation in consulting room

High quality non collapsible plastic with retractable, attached, hanging loop at the base. Available in a two-way volumetric 500ml plastic bottle, that keeps the solution safe :

- during transportation
- from micro cracks
